## **LISTING OF CLAIMS**

Following is a listing of all claims in the present application, which listing supersedes all previously presented claims:

- 1. (Currently Amended) A solid oxide fuel cell that directly operates with a sulfurcontaining hydrocarbon fuel that does not have to undergo prior treatment to remove organic sulfur compounds comprising:
  - (a) a solid electrolyte comprised of an electronic insulator which allows transfer of anions, a ceramic-metal composite anode containing at least ceria and a cathode, at least the solid electrolyte and anode being prepared together to form a porous anode layer and a dense solid electrolyte layer, and then impregnating the porous anode layer with an aqueous solution containing a salt of at least ceria;
  - (b) a fuel comprising a sulfur-containing hydrocarbon having a sulfur content of from about 1 ppm to about 5000 ppm; and
  - (c) an oxygen source.
- 2. (Original) The fuel cell according to claim 1, wherein the hydrocarbon is a petroleum distillate.
- (Currently Amended) The fuel cell according to claim 2, wherein the petroleum distillate is selected from the group consisting of gasoline, diesel oil, naphtha, JO-4 JP-4, JP-5, JP-8, kerosene, motor oil, natural gas, fuel oil, and mixtures thereof.
- 4. (Previously presented) The fuel cell according to claim 3, wherein the petroleum distillate is selected from the group consisting of JP-4, JP-5, JP-8, and mixtures thereof.
- 5. (Previously presented) The fuel cell according to claim 3, wherein the petroleum distillate is selected from the group consisting of naptha, kerosene, fuel oil, and mixtures thereof.

- 6. (Previously presented) The fuel cell according to claim 3, wherein the petroleum distillate is selected from the group consisting of gasoline, diesel oil, natural gas, and mixtures thereof.
- (Original) The fuel cell according to claim 2, wherein the hydrocarbon comprises an alcohol.
- 8. (Previously presented) The fuel cell according to claim 7, wherein the alcohol is selected from the group consisting of methanol, ethanol, and mixtures thereof.
- 9. (Previously presented) The fuel cell according to claim 2, wherein the hydrocarbon is selected from the group consisting of dry methane, butane, toluene, decane, and mixtures thereof.
- 10. (Original) The fuel cell according to claim 1, wherein the sulfur-containing hydrocarbon fuel has a sulfur content of from about 1 ppm to about 1000 ppm.
- 11. (Original) The fuel cell according to claim 10, wherein the sulfur-containing hydrocarbon fuel has a sulfur content of from about 10 ppm to about 1000 ppm.
- 12. (Original) The fuel cell according to claim 11, wherein the sulfur-containing hydrocarbon fuel has a sulfur content of from about 20 ppm to about 1000 ppm.
- 13. (Original) The fuel cell according to claim 12, wherein the sulfur-containing hydrocarbon fuel has a sulfur content of from about 100 ppm to about 1000 ppm.
- 14. (Original) The fuel cell according to claim 13, wherein the sulfur-containing hydrocarbon fuel has a sulfur content of from about 250 ppm to about 1000 ppm.
- 15. (Previously presented) The fuel cell according to claim 1, wherein the solid electrolyte is an oxide ion conducting material.
- 16. (Previously presented) The fuel cell according to claim 15, wherein the oxide ion conducting material is selected from the group consisting of doped ceria, doped zirconia, and doped lanthanum gallate.

- 17. (Previously presented) The fuel cell according to claim 16, wherein the doped ceria is selected from the group consisting of gadolinium doped ceria, samarium-doped ceria, yttria-doped ceria, and mixtures thereof.
- 18. (Previously presented) The fuel cell according to claim 15, wherein the oxide ion conducting material is yttria-doped zirconia.
- 19. (Previously presented) The fuel cell according to claim 16, wherein the doped zirconia is scandium-doped zirconia.
- 20. (Currently Amended) A process of producing electrical energy, comprising:
  - (a) providing a solid oxide fuel cell that directly operates with a sulfur-containing hydrocarbon fuel that does not have to undergo prior treatment to remove organic sulfur compounds comprising a solid oxide electrolyte that is an electronic insulator which allows transfer of anions, a ceramic metal composite anode containing at least ceria and a cathode, at least the solid oxide electrolyte and anode being prepared togetherto form a porous anode layer and a dense solid electrolyte layer, and then impregnating the porous anode layer with an aqueous solution containing a salt of at least ceria;
  - (b) contacting said cathode with an oxygen source; and
  - (c) contacting said anode with a fuel comprising a sulfur-containing hydrocarbon having a sulfur content of from about 1 ppm to about 5000 ppm.
- 21. (Original) The process according to claim 20, wherein the hydrocarbon is a petroleum distillate.
- 22. (Previously presented) The process according to claim 21, wherein the petroleum distillate is selected from the group consisting of gasoline, diesel oil, naphtha, JP-4, JP-5, JP-8, kerosene, motor oil, natural gas, fuel oil, and mixtures thereof.
- 23. (Previously presented) The process according to claim 22, wherein the petroleum distillate is selected from the group consisting of JP-4, JP-5, JP-8, and mixtures thereof.

- 24. (Previously presented) The process according to claim 22, wherein the petroleum distillate is selected from the group consisting of naphtha, kerosene, fuel oil, and mixtures thereof.
- 25. (Original) The process according to claim 22, wherein the petroleum distillate comprises gasoline.
- 26. (Original) The process according to claim 22, wherein the petroleum distillate comprises diesel oil.
- 27. (Previously presented) The process according to claim 20, wherein the hydrocarbon is selected from the group consisting of alcohols, dry methanes, butane, toluene, decane, and mixtures thereof.
- 28. (Original) The process according to claim 27, wherein the hydrocarbon comprises an alcohol.
- 29. (Previously presented) The process according to claim 28, wherein the alcohol is selected from the group consisting of methanol, ethanol, and mixtures thereof.
- 30. (Original) The process according to claim 20, wherein the sulfur-containing hydrocarbon has a sulfur content of from about 10 ppm to about 1000 ppm.

- 54. (Currently Amended) A solid oxide fuel cell that directly operates with a sulfurcontaining hydrocarbon fuel that does not have to undergo prior treatment to remove organic sulfur compounds comprising:
  - (a) a solid electrolyte comprised of an electronic insulator which allows transfer of anions, a ceramic-metal composite anode containing at least copper, and a cathode, at least the solid electrolyte and anode being prepared together to form a porous anode layer and a dense solid electrolyte layer, and then impregnating the porous anode layer with an aqueous solution containing a salt of at least copper;

- (b) a fuel comprising a sulfur-containing hydrocarbon having a sulfur content of from about 1 ppm to about 5000 ppm; and
- (c) an oxygen source.
